INTERNET OF THINGS

10 Things You Must Consider When Implementing IoT in Aerospace & Composites

1. DEFINE YOUR GOALS
   - IoT can revolutionize manufacturing at your facility. However, trying to achieve all objectives at once will hold you back. Define a couple of key scenarios that require immediate improvement and focus on those first. Composite part manufacturing holds many options for improvement and management.

2. TAKE A STEP-BY-STEP APPROACH
   - A task force can evaluate solution alternatives, define how new processes will fit your organization's culture, pilot the new processes, and define your company's goals. To ensure IoT gets budget and management's attention it must serve your company's main objectives. Implementing IoT, like any initiative or project, must begin with a clear definition of your organization's goals. To ensure IoT gets budget and management's attention it must serve your company's main objectives.

3. STREAMLINE YOUR PROCESSES
   - IoT software solutions will allow you to collect vast amount of data, and define your company's goals. To ensure IoT gets budget and management's attention it must serve your company's main objectives. Once you have a complete digital view, you will be able to bring your factory into the future, make optimized decisions and better handle audits. Once you have a complete digital view, you will be able to bring your factory into the future, make optimized decisions and better handle audits.

4. MAKE AUTOMATION TOP PRIORITY
   - Most manufacturers minimize their risks. However, they lose all advantages at once and fail to handle. Defining a complete set of accurate, important, and meaningful key performance indicators (KPIs) is the first step in translating requirements into meaningful and effective KPIs.

5. GO PAPERLESS - CREATE THE DIGITAL THREAD
   - Technology to the existing systems you already use. This integration means that you are taking automation top priority. Make sure that help you may not be able to automate, even if they can be optimized or accomplished in less steps, driving a smoother process.

6. CREATE A TASK FORCE
   - The root cause of unsuccessful Industrial implementation of IoT is, you may not have enough people to work on it.
